## Health touches us all

Isku Health is the world's first complete collection of furniture that cuts down the spread of infections - without compromising comfort or good looks.

### **100 % natural way of reducing infections**

Isku's innovation is based on natural copper and silver technology on surfaces, fabrics, and coating that actively prevent contaminations. The antimicrobial coating reduces significantly or even eliminates the risk of infections spreading through surfaces, and is ideal for furniture solutions in any public space. No chemicals are used, so Isku's furniture are a safe choice.

### **Complete collection of antimicrobial furniture**

With the new solution Isku Health contributes to the safety of patients and healthcare professionals in sensitive environments. The Health range includes chairs, sofas, couches, tables, office chairs and desks. In addition to the copper based surfaces, the antibacterial effect is ensured with laminates, varnishes, paints and fabrics that have been treated with antimicrobial agents.

## **Break the chain of infections**

Antibiotic resistance is a hot topic. Now is the time to find solutions in stopping the super bacteria from spreading. Isku's Health collection is one answer to this, with the tested and proven ability to reduce the number of infections in hospital environments as much as 60 %.

## For Healthcare

# Life saving design - the best investment there is.

There are 3 million hospital infections in Europe every year, resulting in 37,000 deaths, 16 million extra hospital days and 7 billion euros in extra health care costs.

# 60%

less infections  
in hospitals

New materials and solutions can reduce the number of infections in hospitals by up to 60%\*, which translates into savings of 4 billion euros in Europe.

# 80%

less  
contaminations

Antimicrobial copper has been tested in clinical trials around the world. Studies show 80% less contamination on copper surfaces than noncopper equivalents.

# 99%

bacteria  
elimination

Antimicrobial copper is the most effective touch surface material in the fight against pathogenic microbes, killing greater than 99.9% of bacteria within two hours of exposure. No other material comes close.

\* Results from a US clinical trial, funded by the Department of Defense, observed a 58% reduction in intensive care unit patients' risk of acquiring a healthcare associated infection when just key touch surfaces in their rooms were replaced with antimicrobial copper items.

## 3 steps of cleanliness

Antimicrobial surfaces work like a 24/7 cleaner, actively and tirelessly preventing the bacteria from spreading. They are, however, only one part of the solution. Complete cleanliness can be achieved by following these three steps:

Washing  
hands

Regular  
cleaning

Antimicrobial  
surfaces

## For Public Spaces

**We all spend time  
in shared spaces.  
Why not make them  
cleaner and more  
comfortable?**

### Wherever people meet

What if your employees or customers didn't get seasonal flu this year? The right furniture can make the difference. Cleaner surfaces means less contagions and less sick days. For employers and both public and private service providers choosing an antimicrobial solution can be a strong message of caring.

### Comfort comes with functionality

Shared spaces can be as cozy as home. As well as actively promoting the well-being of its users in terms of health, Isku's furniture is designed to meet the high standards of convenience and good looks. Full range of furniture together with a variety of material choices makes it possible to fit a design solution to any kind of shared space.

## Tables

An electrically height-adjustable desk is an investment in the future that benefits both the employee and employer. The electric desk enables quick and easy workstation customisation according to quickly changing needs and circumstances. Well-being at work and performance will improve as the working position can be changed during the day.

# Inkoo Pro

## Design

Ilari Jääskeläinen

3722 Inkoo Pro sofa

Work, lobby and break areas are often required to serve multiple purposes: the spaces are used for both social receptions and relaxation. The timelessly stylish Inkoo Pro was designed to meet both needs.

Inkoo Pro is perfect for lobby areas as well as a variety of break rooms and waiting areas at the workplace. Staff rooms and company lobbies are excellent examples of spaces where Inkoo Pro is right at home.

This series includes an easy chair, two 2-person sofas of different widths, two 3-person sofas of different widths, a corner sofa, an end piece and a footstool. The series also includes decorative and tubular cushions. Upholstered with fabric or leather.

The sofa features fixed upholstery that maintains its shape and requires very little care.

For the legs, you can select between a metallic frame base (silver, graphite grey or chrome) or Inkoo's individual birch corner legs without the frame structure. The metallic frame base lends the sofa an impressive look and protects the bottom, which is susceptible to dirt and grime from cleaning or contact with shoes.

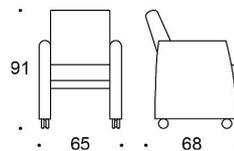

# Organo

Design Raimo Räsänen

3730 Organo chair

The Organo easy chair is completely upholstered, and is equipped as standard with casters that make it easy to move around a conference table, for example. The chair features brake casters, and it is also available with pads. The chair can be provided with fabric upholstery.

Organo

# Ritz

Design Raimo Räsänen

4856 Ritz armchair

Ritz is extremely robust, which makes it perfect for furnishing public spaces. The wooden parts of the Ritz easy chair are birch or oak, and the seat features zigzag springs. Fabric or leather upholstery. There are numerous colour options for the wooden parts. A removable chair and neck support cover with moisture protection is also available.

Ritz

# Step+

Design Juha Lähti

3070 Step+ office chair

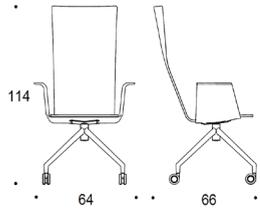

The Step+ office chair is designed to meet the user's requirements. Different sized seats and backrests are available. In addition, the chairs are available in standard or soft options according to the user's preference. The free-float mechanism makes it possible to adjust the position of the seat and backrest freely, and independently of each other. The mechanism can also be left in an active state, so that the seat and backrest follow the movement of the body.

# Duo

**Design Antti Olin**

The Duo conference chairs are light, durable and ecological. Due to the heat-formed Grada plywood, the sitting comfort is excellent without compromising gracefulness or lightness. The material flexes when sat on, and a thin cushion is sufficient. With the beautiful, technical birch veneer surfaces you can create functional groups and the fabric and leather options offer several attractive combinations.

## HygTech Alliance

# Together we are more.

### For safe and functional shared spaces

The companies of HygTech Alliance together provide a holistic line of antimicrobial solutions for shared spaces. All touch surfaces can be made antimicrobial, effectively reducing the growth and spreading of bacteria.

### Our story

We are an alliance of leading companies, all pioneers in our own field. Together we have over 400 years of experience making both functional and good-looking solutions for shared places and environments. Our innovative solutions for everyday life are used by millions of people around the world.

We all hail from Finland, one of the safest countries on earth and a land of innovative technology. Finland is located in the northernmost part of Europe. Nevertheless, we are sharing the same common future as the rest of the shrinking world. We think that shared global challenges, e.g. pandemics, need to be solved collectively.

Collaboration as our driving force we combined our expertise and created the first holistic line of antimicrobial defense for shared places. The solution increases well-being by reducing microbes that spread through touch.

We are an alliance of developers, engineers and designers dedicated to help create good-looking, functional and safe shared places. Our vision is to drastically decrease the number of contagious infections transmitted through key surfaces.

## Designed and made in Isku, Finland

Isku was established in 1928 in Finland. Isku is one of the leading Scandinavian family owned companies providing interior design and furniture solutions for public and private premises. Isku designs work and office, healthcare and special accommodation facilities as well as learning environments for educational facilities.

Employing over 700 employees, Isku Interior is operating in Finland, Norway, Baltics, Poland, Russia, Sweden, and in the Middle East. Isku Interior complies with ISO 9001 standard and constantly develops new ways of ecological production. Isku Interior was the first furniture company to be certified with the environmental standard ISO 14001. The products of Isku Interior are PEFC certified ensuring that the wood used in the production comes from responsibly managed forests.
