

No chance of fire! OBO's fire protection duct system PYROLINE® Rapid Now also available in pure white

The fire protection duct made from sheet steel has an inner coating that intumesces in the event of a fire, preventing fire and smoke spreading. This means emergency and escape routes stay available. PYROLINE® Rapid can be suspended or mounted directly onto walls, ceilings or floors. The new look with a pure white surface now makes it suitable for use in architecturally sophisticated surroundings.

Prevents the spread of fire

Protects escape routes against the impact of a cable fire

Large usable cross-section with small outer dimensions

Sheet steel duct with intumescent inner coating

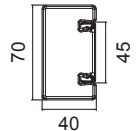

In the event of fire, the sheet steel duct actively prevents the spread of fire and protects emergency and escape routes against the impacts of a cable fire. The cover and base are securely interconnected using the self-contacting patented locking brackets. This also creates equipotential bonding.

Satisfying fire resistance classes I30 to I120 according to DIN 4102 Part 11. It can be mounted directly on the wall or on the ceiling, beneath system floors on the raw floor, or suspended on support systems or with the aid of connector elements (support spacing max. 1 m).

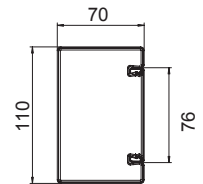

Included in the delivery: Cover and base as a unit, complete.
